

SPM Equipment Report

Hopefully by the spring planning meeting we will have the incline measured on the launch rail and will be using that information to price out a suitable replacement winch.

We are expecting the parts for the backhoe by the end of next week and that too should be up and running by the SPM.

We have the tools needed to clean the discharge line and will look at getting that done during the work party, as well as some minor maintenance to the mower.

Our new pump out pump should be on site shortly and will get that up and running during the spring work party.

For the future I would like to get a committee together to look into developing a plan for moving boats in the yard without relying on so much manpower.

Dan
